# NEW IN THIS RELEASE GENERAL

# 1. NEW REDESIGNED UI

It's finally here! Introducing the new, powerful, redesigned Comidor v6.0.

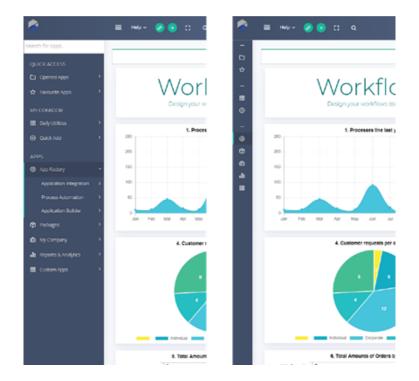

It's our mission to create a product that's **simple**, **pleasing**, **and easy-to-use** — one that you'll enjoy using. With that in mind, we released Comidor v.6.0.

With this major release, we've changed our primary color palette and made a whole bunch of other UI adjustments.

We **kept all the functionalities** we know **you love**, while we redesigned the interface to make it more **user-friendly**, **lightning-fast** and **beautiful** to work with.

Our new simpler menu is ideally designed to make your navigation smoother

Sometimes it helps to have the menu **wide open**, sometimes it's better to collapse it to a slim **icon-only** bar to keep it as compact as possible.

So we've added a new burger menu button at the left top (three horizontal lines symbol) to let you **take control**.

#### Mobile-first design approach

You will also notice that the new user interface can dynamically adapt to your available screen size for optimised readability.

You can enjoy a **tailor-made device experience** and have everything centralised at your fingertips.

#### Less compexity, greater user experience

In this release, we put a lot of emphasis on where to guide user's attention and **break down the complexity** in order to achieve a **greater user experience**.

We've simplified the **notification bar** so that users can have instant access to their notifications, emails and calendar without getting distracted from anything else.

What's more, through the main bar users can instantly **customise their home dashboard** as well as **start a new application**.

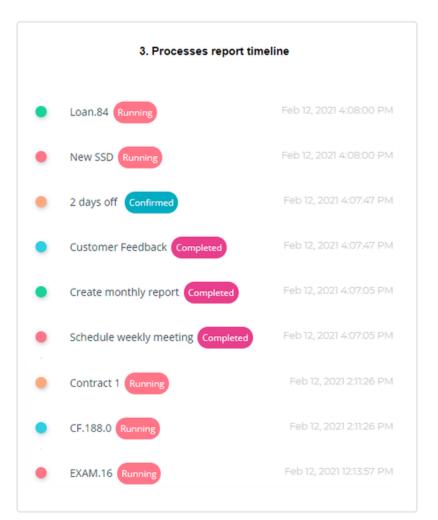

#### Minimalistic forms and tablets

We prioritised readability and removed any visual clutter that may distract the eye.

The forms and tables have now a **clearer**, more **modern** look, so that it's **easier on the eye** and easier for you to get stuff done.

# 2. HOME DASHBOARD

The new Home Dashboard comes into play to save you time, offering exactly what you need in one single panel. With all of your **workflows, applications and widgets in one place**, your work has never been easier.

Create a customised experience that matches your daily tasks and processes

Build and modify your dashboards with a simple to use **No-Code builder**. Add multiple tabs, applications, "quick add" forms, icons, labels and graphs. Resize and arrange the elements easily with drag-and-drop functionality.

- Combine different data sources to connect the dots and get deeper insights
- Add different types of widgets based on your needs
- Build flexible, responsive layouts

# 3. LEIA THE CHATBOT

We are introducing Leia, Comidor's new intelligent virtual agent.

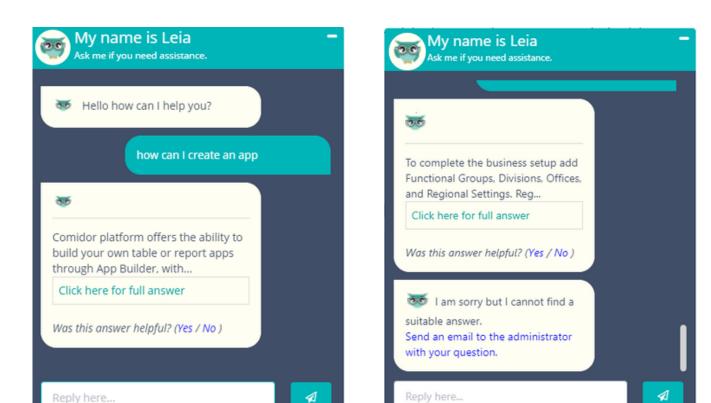

Every organisation deals with multistage internal processes, workflows, forms, rules and regulations.

It's vital for every employee to have access to essential information in order to perform their work efficiently and effectively.

Leia is an Al-enabled chatbot that helps employees and teams work smarter, remotely and more efficiently.

This chatbot can have quite an influence on how your employees experience their day-to-day duties. It can assist them in a more natural, more engaging, and ultimately, more human way.

The employee simply **asks a question** and Leia answers the question with **specific data**, recommends a useful **reading source** or urges the user to send an **email** to the **administrator**.

# 4. KNOWLEDGE BASE

Leia, the AI chatbot, retrieves data from a knowledge base and delivers information instantly to the end-users.

Comidor allows you to create **your own knowledge base**, the central repository for all the information your chatbot needs to support your employees and answer questions.

For every question you are able to add:

- category
- keywords
- relevant answer
- supportive links

# 5. PUBLISH APIS

The APIs for all CRUD operations of the applications built with Low-Code are automatically created when you publish the application. In every data change, the platform updates the API, meaning that **no API designer is required**.

## 6. VIDEO CONFERENCE

With remote work, the importance of video calls has skyrocketed lately.

With Comidor v6.0 you can facilitate remote video conferences:

- Share your audio, slides, chat, video and desktop
- Engage with the participants with the built-in polling
- Make your points clearer with virtual whiteboards, annotations, and drawings

# 7. TRANSLATIONS

We created a new unit to define words and their translation to different languages.

**Things became pretty simple**. What you have to do is just change the language from the Settings. With this, the field labels in workflows, pop-up messages, application names will be translated to the selected app language.

Translation Details		Save	Save and New

# WORKFLOWS

Comidor workflow designer with the new powerful RPA, AI/ML components enables you to create **intelligent workflows**, orchestrate **human** and d**igital workers** to execute and automate workflows across your high-value business processes.

Designers can replace manual steps, save employees' valuable time, eliminate errors and accelerate process automation with the following:

# 1. SELENIUM RPA

Use the RPA Selenium element in your workflow to **replicate** repetitive time-consuming **manual** steps in a web environment.

• Define all the actions that you wish the bot to execute step-by-step (e.g., go to a URL, click, hover, sleep, input, etc.).

• Use unique CSS Selectors for specifying each element.

• Retrieve or exchange data from web applications and store it in user fields of the workflows.

• The RPA Selenium bot runs in the background, so it will not "waste" your valuable resources.

# 2. EXCEL PROCESSOR (RPA)

Use the RPA Excel Processor element to **parse a big Excel file** or part of it. Choose from the following actions:

- 1. **Parse Excel** capture values of cells into user fields or an entire area of the Excel and store them in an Excel type user field.
- 2. Get No of Sheets get the number of the sheets in the uploaded Excel (useful for large Excel files with multiple sheets).
- 3. Find in Sheet find a certain value in the Excel file (Define the Search Index).
- 4. Find the row in Sheet find a specific value in an Excel file and get the entire row as a response.

# 3. GRAPH CREATOR 🕒

Add one or more Graph Creator elements to your workflow design to produce **interactive graphs** based on **workflow data**.

- Choose the type of your graph.
- Define which workflow data you wish to display in your graph.
- The produced graph is stored in a binary field (.png format) and can be displayed in **forms** and **process fields**.

# 4. IMAGE CLASSIFICATION (AI)

Include an Image Classification component in your workflow to **scan** a file and search for a specific image.

If the "wanted image" is found, you can assign a certain value as a response. Response field can be used in **workflow conditions** at a later step as well.

# 5. WEB SCRAPER (RPA)

Use an RPA Web Scraper element in your workflow to **find information** in a selected area of a **website** and then store it in user fields.

- 1. Define the URL that should be scraped. Select a text field type.
- 2. Choose the Search selector from a variety of options (xpaths, class, id, etc.) based on the website you are scraping.
- 3. Define the unique Selector.
- 4. Store the result of the RPA Web Scraper in a user field.

# 6. DIGITAL SIGNATURE

Most business processes include authorisation steps and document approvals. With the new Signature models & digital signature component, you can automatically include **signatures to PDF documents**.

In the new unit Signature models, you can create a signature model, where you can specify a PDF template and the part(s) of the document where you want one or more digital signatures to be added. model.

PAGE | 11

When you execute the workflow, the system will place the user's signature in the part of the document you want.

Users can **draw/set their personal signature** in their user settings. This signature is automatically fetched in documents with the use of Signature models and workflows.

With this new workflow component, you can **read and write message queues (MQ)** within a process.

- Specify MQ details (host, port, routing key), the type (read or write), and the message.
- Values from workflow fields can be included in the MQ message.

# 8. ABILITY TO COPY TASK

You can now save valuable time by copying workflow tasks.

In particular, in workflow design users can click on the duplication icon of a task and a duplicate task will be created. All task information such as assignment, form, description, etc., will be copied, too.

# APP BUILDER

# **1. FORM CUSTOMISATION**

You now have more control over your form appearance. Go to form designer and change fonts, colors, and highlights to add a **personal touch** and reflect your company's **brand identity**.

	Style		veleta X
Design Fullscreen Publish	Page		
Blocks	Background Color

CREATE_DATETIME UPDATE_DATETIME UPDATE_DATETIME	Font Weight	v	
Processes Processes Ref no	Font Style	v	
Ticket category Subject Description	Label		
Name Email Company name Sentiment	Background Color		
Confirm resolution			

# 2.FILE VIEW TRACKING

File view tracking is an excellent way to ensure that information runs smoothly while everyone has access to it.

You can activate the File view tracking feature in step Overview for any application you want.

Ticket.31 / Jan 20, 2021				0 🗘 🗘 (0) Running	↓ [] ×
RELATIONS	Customer request details	Summary			
Subprocesses 0	User	Date	Time	Document Viewed	¢
Document Audit 2	Alexandra Birnie	Jan 14, 2021	3:46:59 PM	Company Z_proposal.pdf	
Workflow Tasks 1 Related Tasks 0	Tom Wells	Jan 18, 2021	1:18:30 PM	Meeting_notes.pdf	

By doing so, all records will include a **Document Audit** tab, to track binary fields (files). Data transparency is achieved by capturing document audit details, reviewer names and review dates and times for all binary fields of this workflow.

# 3. APPLICATION BUILDER IN 3 STEPS (AI)

It's time to build for your company a business application. You don't need highly skilled developers. Comidor v6.0 enables everyone to **build apps within seconds** and then customise their functionalities and appearance.

Get your feet wet with Low-Code application creation within 3 simple steps:

- 1. First, describe your application by giving details of your App. Make sure you include information about the type and name of the application, the forms and fields you wish to include.
- 2.Secondly, the system using NLP suggests names of fields and forms based on your description. So, you can confirm the suggested steps, fields and forms.
- 3. Finally, publish your app!
  - You can always edit and enhance the app you just created in App builder.

(1)	2	3
Step 1	Step 2	Step 3

# 4. APP INITIATION FROM INCOMING EMAIL

Boost your business process automation by including **incoming emails** as **triggering points** of an application. With the new email configuration unit:

Define the email account whose incoming emails will be monitored

- Map keywords, so when you have an incoming email, the system will search for them in the subject of the email. If the keyword is found, a respective app will automatically start
- Attachments, hardcoded values, and other data from email subject or body can be fetched into user fields

Basic Info							
Title	Initiation of Customer Requests App						
Monitored Email	testingcomidor@gn	nail.com

	[Customer request management] Attachment	Attachments			Attachment.docx		
	[Customer request management] Subject	Email Subject	CR				
	[Customer request management] Description	Email Body					
	[Customer request management] Email					automated	

# 5. EVENT SCRIPTS

For advanced users, we have included an extra step in App Builder to write their procedures. In this step, you can write scripts for a certain data type to be executed before/after/on a specific event.

- Add the Procedure Name.
- Choose the Data Type (apprec, task, process, dataset) and define where you want the script to be applied.
- An Event Type can be inserted, updated, deleted, etc.
- Add your code in the Procedure Body.

Basic Info	Data Model	Table	Forms	Widgets	Tabs	Workflow	Event Scripts	Overview	Publish

		Inser							
Parameters		upda Execu							
		Add	11.00						

# 6. PUBLIC FORMS

Forms are designed to be also embedded as Public forms in other websites, so that clients are not required to log in to Comidor. Making it thus possible to add a form that **triggers a workflow in every web page** just with HTML.

Public forms are embedded forms similar to the quick add forms in Comidor, including all user fields and business rules. This feature is available to all quick add forms of user applications.

# IMPROVEMENTS IN THIS **RELEASE**

We may be redesigning Comidor from scratch and creating many new features, but we've still made time to make **critical improvements** that will make your work-life easier and more efficient.

# WORKFLOWS

# 1. DOC ANALYSER

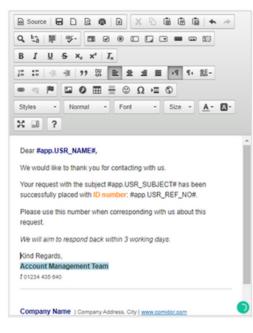

This element has been enhanced and now includes also table extractor and Excel processor for parsing Excel.

# 2. COMIDOR DATA 🥃

This component enables users to save a document that is created from the document creator component **directly** to a folder in Comidor DMS.

# 3. HTML EDITOR IN EMAILS

You can now add **rich text** in all email bodies sent from workflows.

Add font sizes, colors, apply the format you want.

The same feature is available in task emails and emails being triggered by escalations.

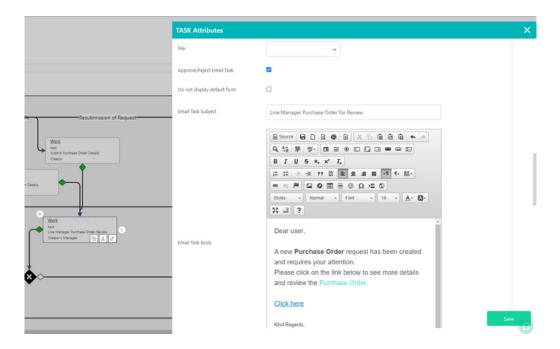

## 4. EMAIL LINKS

Designers can include **links in email components** automatically triggered by the workflow. This link will be sent to external email accounts with a workflow form that includes information from workflow fields.

# 5. TASK EMAILS

Designers can easily **configure a task email with Low-Code**, by defining the approve/reject link, approve/reject buttons and the email body.

Furthermore, in task emails that create links for approvals, there is now the ability to define the token/URL duration in days.

# 6. ALLOW MANUAL COMPLETION

Designers can **enable or disable** the **manual completion of a process** linked to a certain workflow. Hence, potential errors by end-users are prevented.

# 7. WORKFLOW REPOSITORY

- Inside the workflow record, designers can specify the "Business Owner" of the process from a wide list of all users, as well as the "Purpose and Scope" of the process. Those fields are also depicted in the Business Process Document that is automatically generated.
- Inside the workflow record, we added a new tab called "All Documents". This tab displays all attachments uploaded in all tasks of this workflow.

# APP BUILDER

# 1. FORM DESIGNER

**Reduce user frustration** with tooltips. In quick add forms, designers can now include tooltips that bear additional information regarding specific user fields and can guide the end-users on proper data input.

# 2. BUSINESS FUNCTION

We added a new "Business Function" field at the overview step of the application builder. This allows the process categorization, even in the case of an app-supported process.

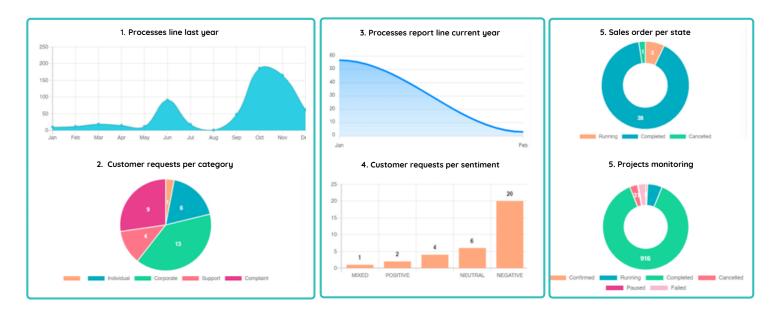

# WIDGETS

Comidor offers an easy way of creating visual reports via Widgets.

By taking advantage of the data that is stored inside Comidor, users are able to make visual graphs that can be of great assistance in the decision-making process.

In this new release, we unveiled a set of new, interactive charts to give you more ways to explore and analyse **real-time data**.

Leverage the power of data and create your visual reports based on **three** widget types (Report, Grouping and Conditional Grouping) and multiple graph types (Bar, Pie, Line, Doughnut, Progress, Timeline, etc.).
