DIGITALWORKPLACE

UI/UX ENHANCEMENTS

We have dedicated significant efforts in the past few months to enhance the efficiency and enjoyment of using Comidor. With version 6.3, we delved even further into the system, identifying areas that could be further improved. As a result, we have successfully made the platform more user-friendly and convenient for our users.

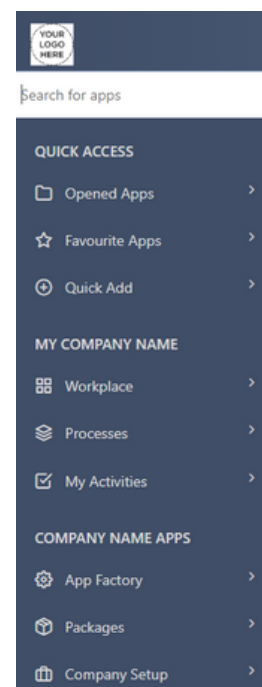

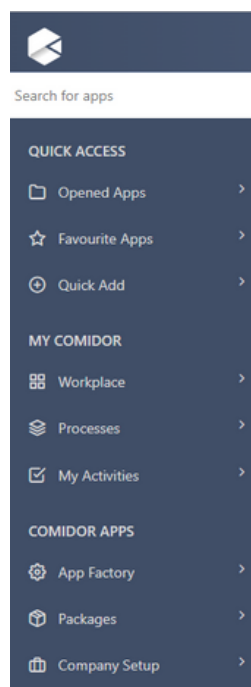

Specifically, we have made the following improvements from a UX/UI standpoint:

- ✔ Streamline and optimize user experience with **app parameters!**
With the power to fully customize **the end-users menu options, notification bar, default welcome screen, and menu categories** to better fit your business needs, you can keep up with the ever-evolving market landscape. More specifically show or hide specific icons in the notification bar and easily define which app/unit will be the default welcome screen. With app parameters, you can say goodbye to default menus and make sure users only see the categories that matter most.

- ✔ Customize the look and feel of your account to suit your company's brand. **Set your default account and upload a logo** to display at the top left corner of the screen for a professional finish.

- ✔ With just a few clicks, you can easily personalize the Comidor menu by **renaming the "My Comidor" and the "Comidor Apps" section titles** to appropriate names for your business. This feature makes it easier for you to organize and manage your different apps, allowing you to get maximum value out of this powerful platform.

HOME DASHBOARD ENHANCEMENTS

Introducing Comidor Home Dashboard Enhancements: Elevating Your Home Dashboard to New Heights! Get ready to start organizing your Home Dashboard in a whole new way!

✔ **Application** tiles are now enhanced: You can add a personal touch to your tiles, by including images.

✔ Plus, you can **customize the colors**, add transparent background color, and **define the alignment**, and the font size of its text.

✔ Finding which application to include in your shortcut application tile is even easier with the ability to **search by application category**.

✔ Make your **Media** tiles in the home dashboard truly unique; take your favorite images from your local storage and add them to your desired tile!

✔ Keep track of your sales opportunities with our easy-to-use **funnel** report visible on your Home Dashboard. Quickly visualize the progress and success of your business and get the insights you need to make better decisions. Just click on the checkbox in the **graph** tile and get the funnel report.

ADMIN DASHBOARD

Are you tired of struggling to keep track of your various processes? Do you find it difficult to locate specific processes or filter them according to your needs? With Comidor **Admin Dashboard**, you can now seamlessly monitor, filter, and sort processes of any type with ease in one centralized screen!

✔ **Simplified Process Monitoring in a Centralized Screen:** Comidor Admin Dashboard offers a user-friendly interface that allows you to effortlessly manage and monitor your processes. No more wasting time searching for relevant information on your process applications in separate tables. Gain full visibility into your process apps and stay up-to-date on their progress.

✔ **Advanced Filtering and Sorting:** Finding the right process has never been easier! Comidor Admin Dashboard enables you to apply various filters and sorting options to quickly locate the process apps you're interested in. Whether you want to find processes you've created, those you're an administrator or any other processes, our powerful filtering capabilities ensure you can access the information you need in no time.

The screenshot displays the Comidor Admin Dashboard. At the top, there are status indicators for Running (464), Active (510), Pending (47), Due today (3), Delayed (495), With delayed tasks (521), and All (4193). Below this, a table lists various processes, including 'Customer complaint', 'Residence disease high risk areas', and 'SW delivery to client D'. The right side of the dashboard shows a detailed view of process 'HR.0873', featuring a flowchart and a table of tasks.

Title	Assigned to	Date Started	Date Ended	Scheduled duration	Duration

Request again documents	HR	24-Apr-2023 12:31:10		0.00	0.00

OTHER WORKPLACE IMPROVEMENTS

✔ Make sure you're always sending the right message with the **Default Sender Account** feature. Manage your multiple mailboxes in Comidor just by choosing your preferred email account through your profile as your default sender. You can be confident that every time you compose a new email or reply to a message, it'll be sent from the right email address.

✔ Get the most out of your team with the **Group Task Filter** in your Calendar! This feature helps you view and manage tasks that are assigned directly to you or to a group you belong, quickly and efficiently, allowing you to focus on what matters most - getting stuff done!

The screenshot shows a calendar for June 2023. A task titled 'Call client' is scheduled for Friday, June 2nd, from 09:00 to 10:00. The calendar interface includes navigation buttons and a filter dropdown set to 'All groups'.

APP DESIGNER

A NEW TYPE OF APP: PORTAL

Comidor v6.3 is revolutionizing the way businesses create portals, with its new user-friendly and visually appealing user interface. Enhance user experiences with this cutting-edge feature and empower your business to effortlessly build dynamic and personalized portals, captivating your audience and revolutionizing their interaction with your business.

Effortlessly craft responsive portal apps without writing a line of code. Choose from an extensive array of components such as text, labels, images, links, buttons, tables, grids, and more. Simply drag and drop these elements onto the canvas, arrange them to your liking, define the desired style, and effortlessly associate components with specific properties. Preview your design live as you build your portal. Our powerful designer puts you in complete control, making the creation of portal apps a breeze.

The screenshot displays the Comidor v6.3 App Designer interface for creating a 'Reservations' portal. The top navigation bar is teal and contains the title 'Reservations' and several utility icons. Below the navigation bar, there are three tabs: 'Html Template', 'Custom css', and 'Custom Js'. The main workspace is divided into several sections:

- Left Sidebar:** A vertical navigation menu with five numbered steps: 1. Dashboard (Get an overview of your Application), 2. Forms/Fields (Design your Application), 3. Graphs (Create analytics for your Application), 4. Advanced (Level up the automation), and 5. Configuration (Finalise your application). A 'Template' section at the bottom indicates 'Set up your Portal Template'.
- Top Bar:** Shows 'Html Template' as the active tab, with 'Custom css' and 'Custom Js' also visible.
- External URL:** A text field containing the URL: `https://beta.comidor.com?actorCode=demos&unit=APP_000130`.
- Layers Panel:** A list of design elements on the left side of the canvas, including 'Body', 'Text', 'Row', and 'Button'.
- Canvas:** The central workspace showing a live preview of the 'Check crew availability' form. The form includes fields for 'Start date' and 'End date' (both with date pickers), a 'Ship' dropdown menu, and an 'Origin' dropdown menu. An 'OK' button is positioned at the bottom right of the form. The background of the canvas is a photograph of a port with yellow cranes and stacked shipping containers.
- Component Palette:** A dark sidebar on the right side of the canvas, titled 'Component', listing various UI elements under the 'Basic' category: Label, Button, Div, Text, Image, Input, Textarea, Select, Check..., Radio, Link, and Text section. A 'Table' section at the bottom offers options for '1 Column' and '2 Columns'.

Data Objects & Event Scripts

Data objects refer to discrete units of information that are structured and organized within a computer system or database. When we refer to a "data object," we essentially mean that this particular set of data should be considered an independent entity. Data objects come in a variety of forms, including data tables, lists, forms, pointers, records, files, and sets.

With data objects in Comidor App Designer, you can power up your portal application and quickly and easily create any type of data set you need.

- Create data sets, variables, lists, forms, records, or action data types and define their properties.
- Use those data objects in event scripts and connect them to the portal template.

The screenshot displays the 'Reservation Portal' interface with the 'Data Objects' tab selected. On the left, a vertical navigation pane shows steps: 1. Dashboard, 2. Forms/Fields, 3. Graphs, 4. Advanced (checked), 5. Configuration, and 6. Template. The main area is divided into 'User Tabs', 'Field Rules', 'Data Objects', and 'Event Scripts'. The 'Data Objects' section shows a table with columns: Name, Data Type, Variable Type, and Created by. Two objects are listed: 'pricingTableSet' (DataSet, Admin User) and 'getVenuesSet' (DataSet, Admin User). Below the table, the 'getVenuesSet' object is expanded to show its properties: Name (getVenuesSet), Application (Reservation Portal), Data Type (DataSet), Record, Select Query (SELECT VENUES.ID,VENUES.USR_VENUE_NAME,VENUES.USR_CAPACITY,VENUES.USR_ADDRESS FROM VENUE), Where Clause, Query Order (VENUES.USR_VENUE_NAME), Insert Mode (checkbox), Update Mode (checkbox), and Delete Mode (checkbox).

Event Scripts

The screenshot displays the 'Event Scripts' configuration screen. The left navigation pane is the same as in the previous screenshot. The main area shows the 'Event Scripts' tab with a search bar and an 'Advanced search' option. Below, there's a table with columns for Event Type Prefix, Name, and Created by. One script is listed: 'On' (Create User, Admin User). Below the table, the 'Basic Info' section is expanded to show fields: Procedure Name (u_setAvailableDate), Custom Data Objects (setAvailableDate), Event Type Prefix (On), Event Type (Execute), Position, and Parameters. The Parameters field contains the following code:

```
#u_reservationsRecUSR_START_DATE# = #u_bookDateVar#  
#u_reservationsRecUSR_END_DATE# = #u_bookDateVar#
```

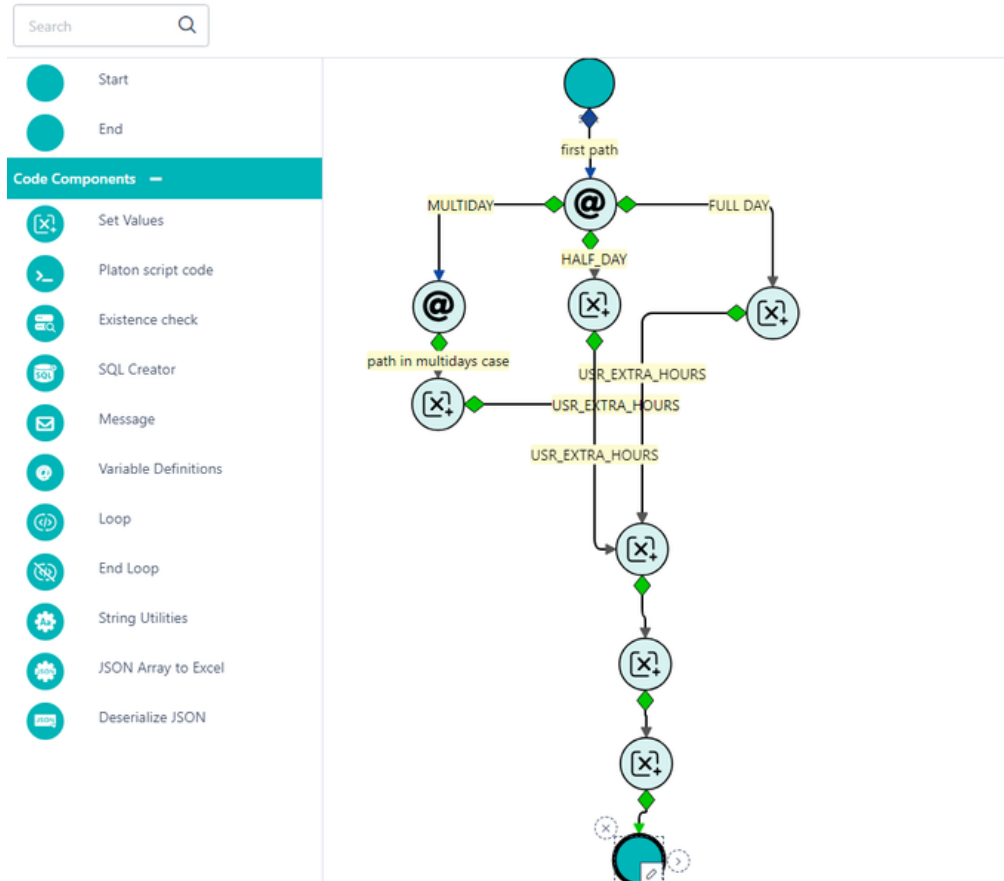

Make complex scripts run on specific events with ease! In event scripts, you can write your customized scripts for any data type and execute them before, after, or on a particular event.

Alternatively, with our new intuitive **code designer**, create customized scripts quickly and accurately with our easy-to-use graphical interface, so you worry less about programming and more about getting the job done.

All you have to do is drag, drop, and connect components - no coding skills required!

Available components:

- Start
- End
- Set values
- Platon script code
- SQL Creator
- Variable Definition
- Info/warning or error Message
- Loop/ End loop
- String Utilities
- JSON Array to Excel
- Deserialize JSON

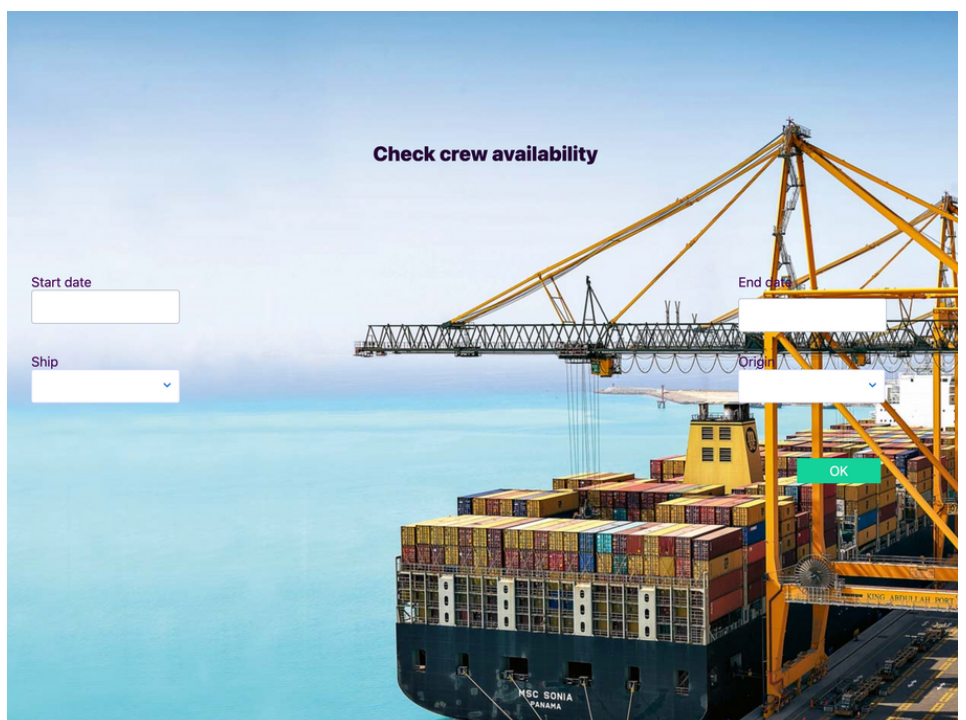

After finishing the design, click the code button and the code will be automatically generated.

Publish & Run

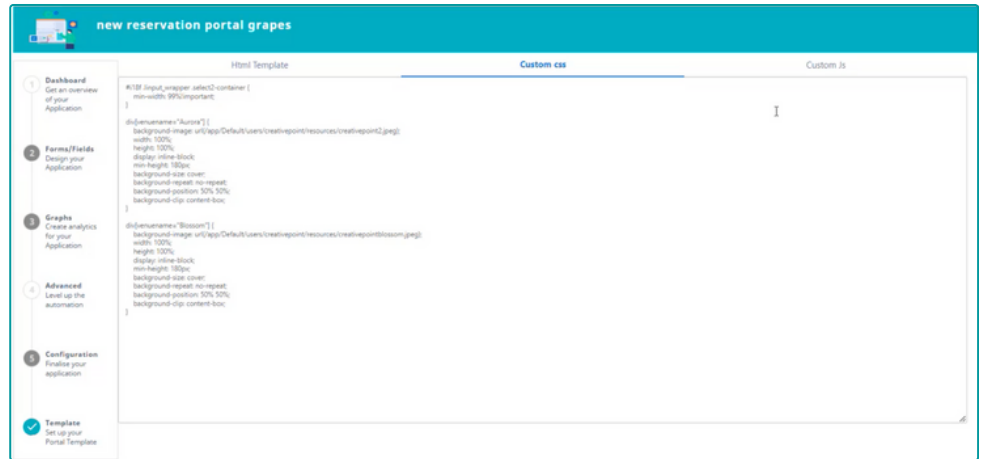

Once your design is perfected, a single click on the "Save" button unleashes the magic. Your app is instantly published, and the HTML design is generated seamlessly. Access your portal effortlessly using the external URL conveniently located above the designer canvas.

Share this public URL to your clients or vendors to involve them in your internal processes, or embed it to your website.

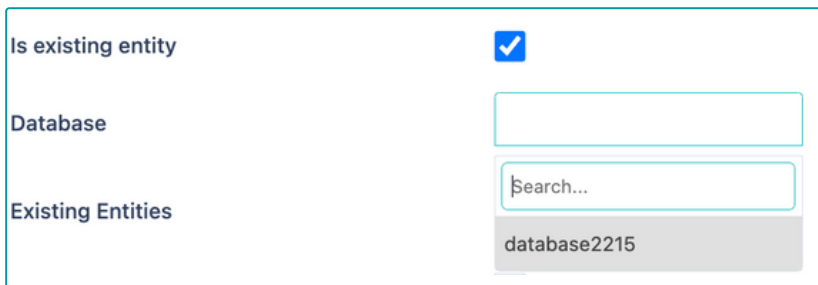

CUSTOM CSS AND JS

Seamlessly incorporate custom CSS and JS within the App Designer, enabling in this way endless possibilities for personalization and enhanced functionality as you build your app. Add your custom CSS and JS rules either during the Configuration step or the Template step when creating a portal app.

APP CREATION FOR EXISTING ENTITY & MULTI-DATABASE CONNECTIVITY

Introducing a groundbreaking feature in Comidor v6.3 that revolutionizes data management - you can now seamlessly create simple table or report applications connected to external databases associated with your account. Effortlessly view, insert, delete, or update records in order to sync data from different databases, allowing you to harness the power of unified information.

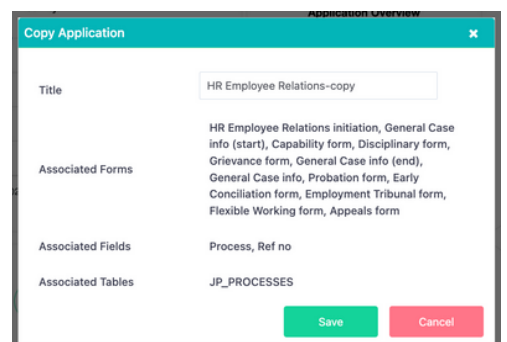

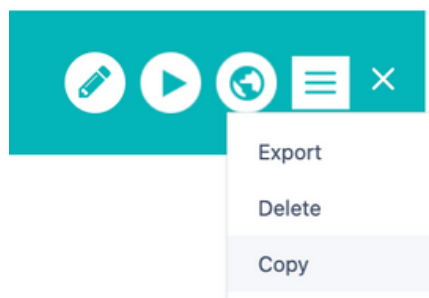

Connect your application to an existing entity in the database by simply checking the "Is existing entity" option.

COPY APPLICATIONS

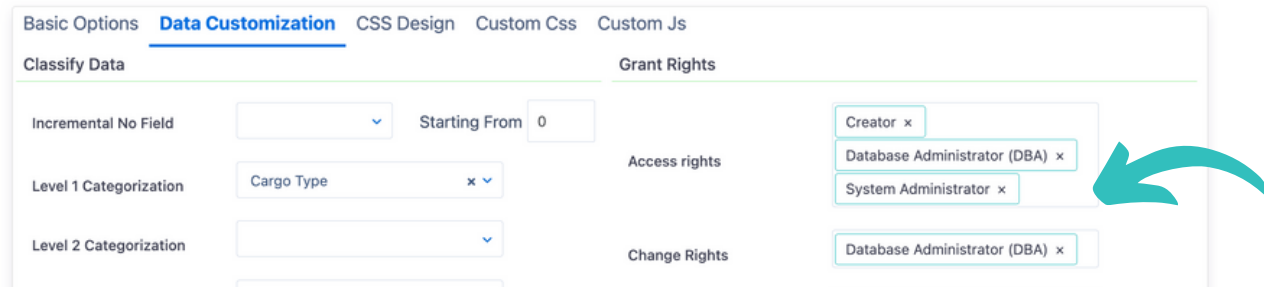

Experience unprecedented flexibility with the latest addition in Comidor v6.3, empowering you to effortlessly **copy any type of application** with ease, saving valuable time, so you won't have to build everything from scratch.

From the Actions button, click "Copy" and, in the popup window, define the title of the new application.

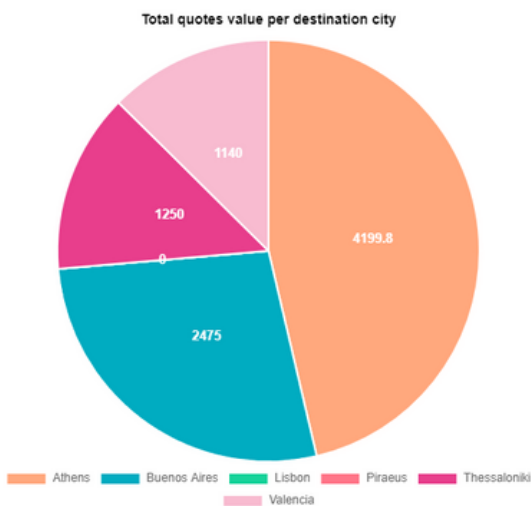

SIMPLE APP ENHANCEMENTS

Now, you have the ability to **define and customize access and change rights** for records in simple table apps. Empower your organization with fine-grained control, granting or restricting user privileges based on their roles and responsibilities. Safeguard sensitive information, ensure data integrity, and foster collaboration with confidence, - all within a user-friendly interface that puts you in complete control.

WIDGET ENHANCEMENTS

The visual representation of your data through Comidor widgets has now been improved with many exciting features!

- In addition to the default filters that widgets currently offer, you can also include up to 3 more **custom filters**!
- Choose the list fields you wish to include in your graph and get real-time reports in all grouping widgets.

The screenshot shows a widget interface with a pie chart and a search filter for 'Spain'. A red arrow points to a CSV export icon.

SUM(CUSTOMER_S_INQUIRIES.USR_TOTAL_COST)	USR_DESTINATION_CITY
4199.8	Athens
2475	Buenos Aires
0	Lisbon
0	Piraeus
1250	Thessaloniki
1140	Valencia

- Reporting capabilities are also enhanced by enabling the designer to create reports by combining information from 2 tables using the **JOIN functionality**.
- For more advanced graphs, **advanced Queries** can be also included.

- Use the filter options for more complex queries and get real-time reports.
- You can also export the multi-series graph in CSV format.

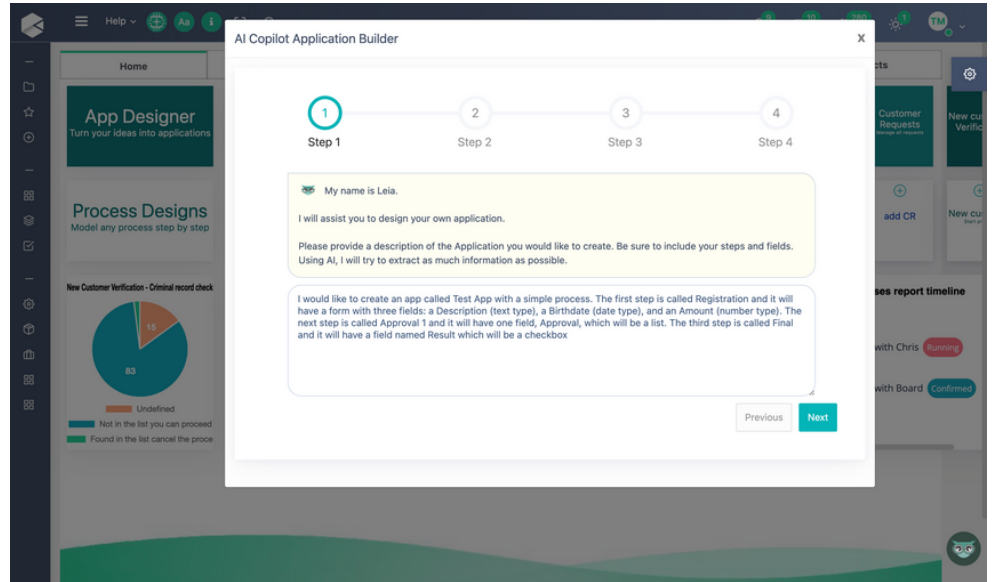

AI COPILOT APPLICATION BUILDER

Introducing Comidor's game-changing **AI Copilot Application Builder** feature, designed to provide users with AI-assisted application development, and unprecedented levels of automation. Simply describe the app you want to build through a series of conversational steps, and the AI Copilot will create it for you. Leverage the power of Artificial Intelligence to develop robust, reliable, and efficient applications faster and with greater accuracy than ever before!

Before using the AI Copilot Application Builder, you should first configure the integration service with OpenAI.

1. Click on the AI Copilot icon located on the top left of the Comidor environment.

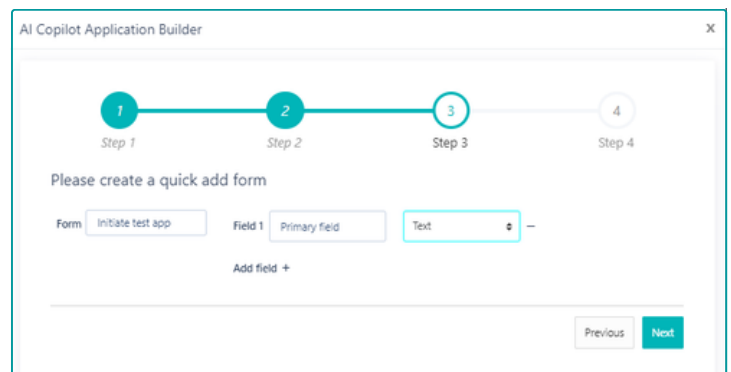

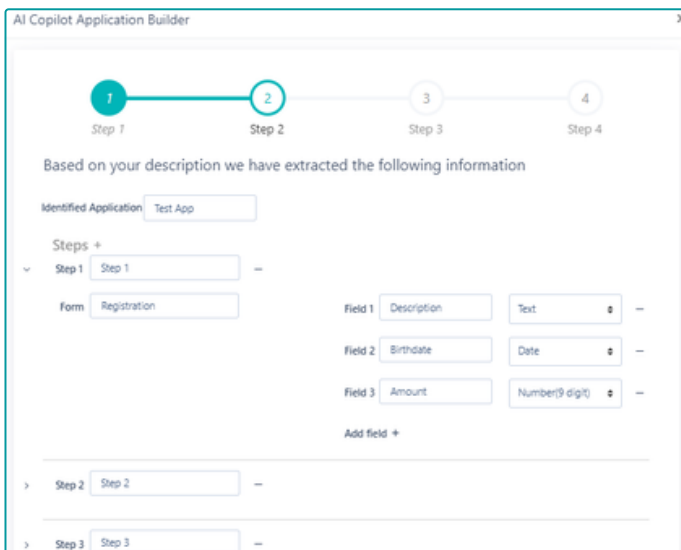

2. In the pop-up screen, on the first step, type a description of the application. Make sure to include details of the steps, forms, and fields you would like to be included.

3. In the second step, steps are automatically generated based on the information provided in the previous step. Each step includes the fields described. Edit the auto-generated fields or add new ones to each step.

4. In the third step, create a quick-add form and its fields to initiate your app.

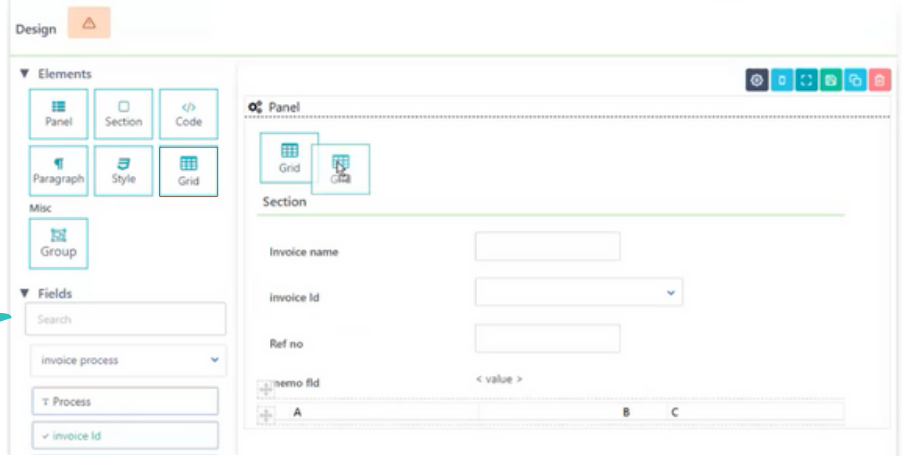

5. Finally, in the last step, select the primary field, which will be the record identity for your process instances.

6. After submitting your choice, your application is published! You are then redirected to the App Designer, where you can access your application, which includes all the steps, fields, and forms created with AI!

GRID COMPONENT

With the new **Grid Component** in forms, designers can display a grid with records from any desired table in a user form.

Invoice Excel

amount	invoice no	invoice name	Invoice date	Is Paid?	countries	users	
444	44	Ref-111	11/24/2022	Yes	Belize	Adam Test	✓ ✕
500	2	INV-2	20221130	Yes	Holy See (Vatican City State)	fgf gf	✕
0	3	INV-3	Nov 10, 2022	No	Central African Republic	Anton Giacomo Bredow	✕
123	123	123	Mar 3, 2023	No	Jamaica	functional functional	✕
22	2342	dsf	Mar 31, 2023	Yes	Montserrat	Shane Ahearne	✕

- Define the Label and data set to be included in the grid.
- The end-user can perform insert, update, and delete actions, which will also be applied to the sub-table.

APP DESIGNER ENHANCEMENTS

- **Workflow version**

Introducing an exciting new enhancement in Comidor v6.3 - effortlessly staying informed about the active **workflow version** being utilized in the App Designer, ensuring transparency and enabling seamless collaboration throughout the development process.

- **App location in the menu**

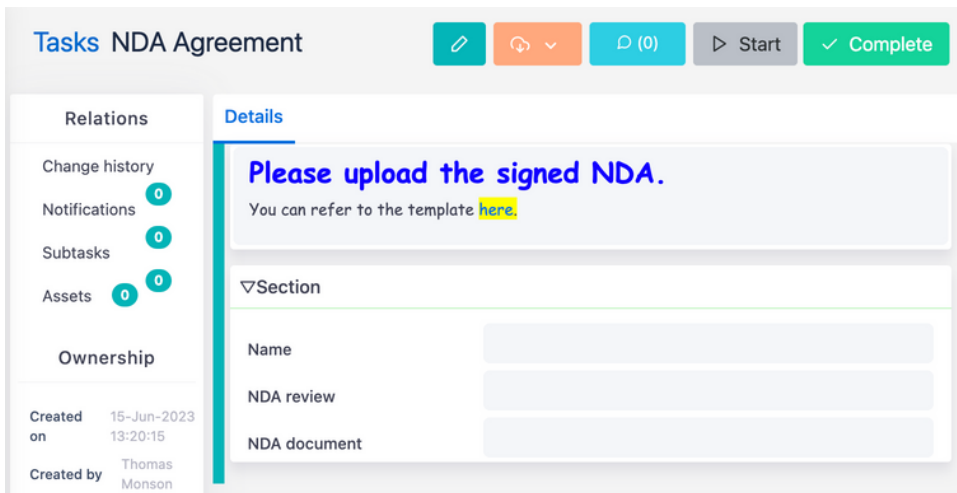

Do you want to define the location of your application in the left-side menu? Define the **module or unit**, and the **category** under which your application will be placed in the app creation form. Effectively categorize your applications, optimize navigation, and enhance overall usability.

Menu Header: My apps ✕ ▼

Category: Supply Chain ✕ ▼

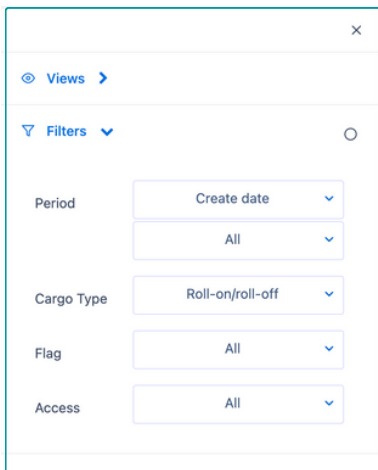

- **Hyperlink in a paragraph inside a form**

Thanks to this exciting enhancement, you are able to **insert clickable links within a paragraph** in a form, enriching your content with additional context and seamlessly guiding users to relevant external resources.

- **Multiple filters in table apps**

Enhance data visualization with the advanced **data filtering capabilities** introduced in Comidor v6.3. During the configuration step of the App Designer, you now have the capability to set filters, allowing you to refine and narrow down data based on specific criteria.

Moreover, you can **apply filters to table columns** and conveniently display them as tabs positioned above the application table, enabling custom data views, smooth navigation, and improved data analysis within your applications.

- **Email automation configuration**

In previous versions, users had the ability to configure incoming emails as triggers for applications. Whenever a new email arrived in a designated mailbox with an attached file, an application would start, saving the file in a designated user's field. The user should have previously specified the filename for the attachment; however, this process had its limitations and room for improvement.

The new Comidor v6.3 release introduces a groundbreaking feature that allows users to **extract multiple files attached** to an email without having to specify the file name explicitly.

WORKFLOWS

CODE COMPONENTS

Include Code Components in the Comidor Workflow Designer to enhance your processes without any coding. Users without development skills can add the following code components into the workflows to replace commands and queries:

Set values: assign values to one or more fields. For example, give a date field the value of the current date, make a calculation, define a certain value, etc.

Existence check: check if a record exists in a particular Comidor application, such as a contact or an account, based on a defined condition (e.g. email).

SQL Creator: produce or execute Select, Insert, Update, and Delete database queries. For example, run an Insert query in a Contacts table.

String Utilities: perform common functions such as the IndexOf and the Substring methods, for a string variable.

JSON Array to Excel: Get values from a JSON array and add them to an Excel-type user field by using this code component in your workflow.

Deserialize JSON: get values from a JSON object and assign them to certain fields. Comidor enables users to map the keys of a JSON object with application fields and give its values to them.

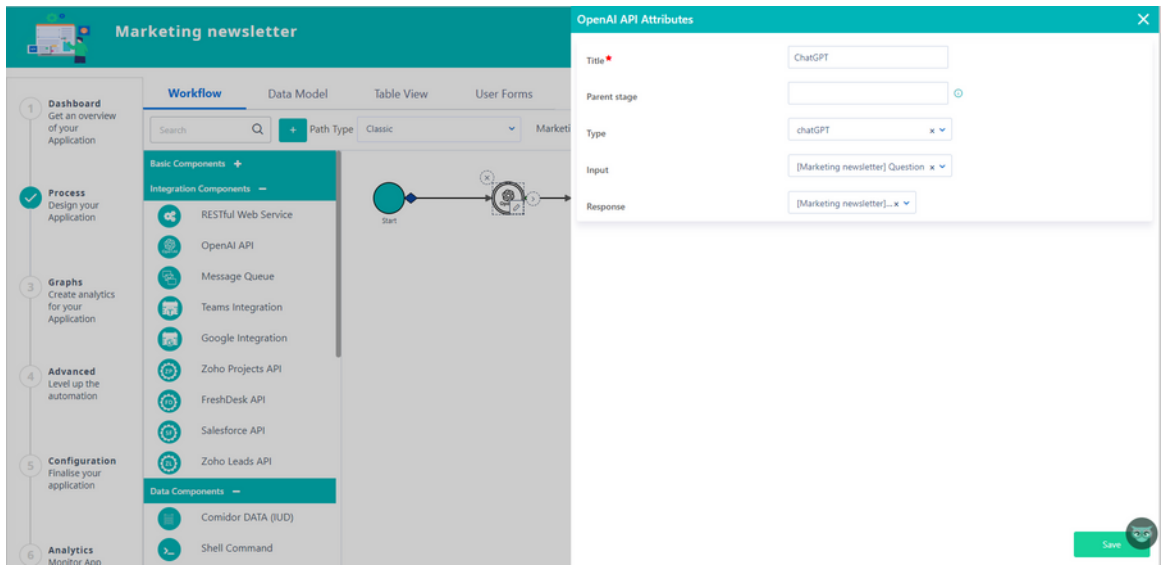

OPENAI INTEGRATION COMPONENT

Improve productivity and boost efficiency by integrating ChatGPT and DALL·E into your business processes. OpenAI integration services can be utilized by a marketing team to generate engaging content for a newsletters.

Drag-n-drop the OpenAI chatGPT component from the Integration Components list to the workflow design.

- For **ChatGPT**, choose the input; a text/memo field to store the question, and the Response; a memo field to save the answer.

- For **DALL·E**, choose the input; a text/memo field where the image description is added, and the Response; a binary field where the produced image by DALL·E is saved.

KPIS UPDATE COMPONENT

Are you tired of manually updating your KPIs every month? Unlock the power of automation with the **KPIs Update component!**

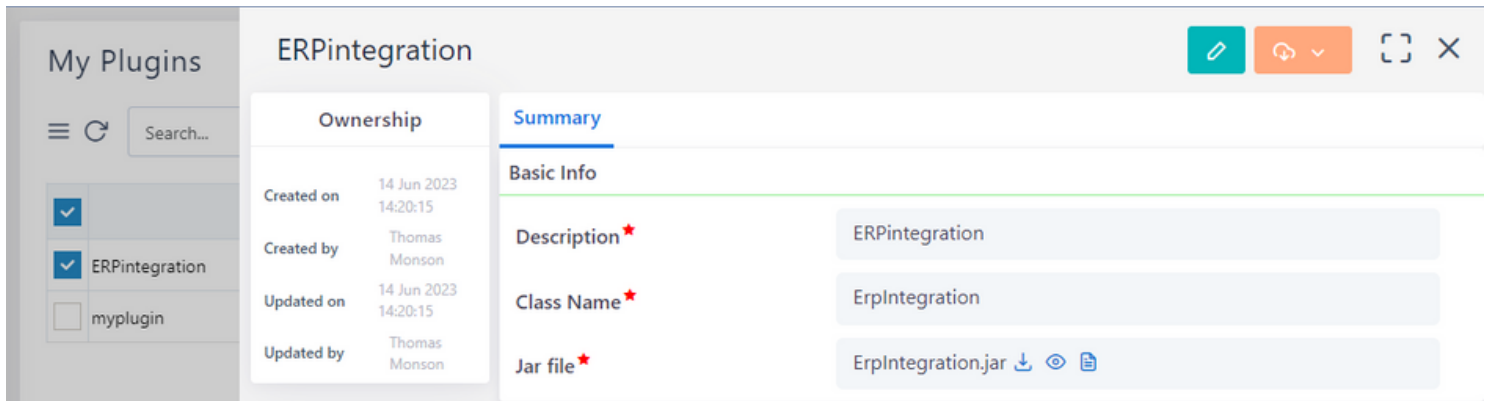

- Now, you can drag-n-drop the component and have your KPI outcomes automatically updated throughout your workflow.
- Choose 1 KPI record from the KPIs unit, which field from the workflow, and for which date range - and you're good to go.

MY PLUGINS

Comidor's workflow customization options are now limitless due to the custom components building. Developers can upload their own plugins for custom code to perform any advanced functionality they wish.

My plugins table

Manage all your plugins in the "My Plugins" table and add new code for your custom components by defining the class name and uploading a JAR file (code in Java).

The screenshot shows the 'My Plugins' interface. On the left, there is a sidebar with a search bar and a list of plugins: 'ERPIntegration' (checked) and 'myplugin' (unchecked). The main area displays the details for the 'ERPIntegration' plugin. It is divided into two tabs: 'Ownership' and 'Summary'. The 'Ownership' tab shows the following information:

Ownership	
Created on	14 Jun 2023 14:20:15
Created by	Thomas Monson
Updated on	14 Jun 2023 14:20:15
Updated by	Thomas Monson

The 'Summary' tab shows the following information:

Basic Info	
Description *	ERPIntegration
Class Name *	ErpIntegration
Jar file *	ErpIntegration.jar ↓ 👁 📄

Drag-n-drop the new Custom Component in any workflow, and then choose which plugin to run. The response of your plugin can then be stored in an app field and used within your workflow.

OTHER WORKFLOW COMPONENTS ENHANCEMENTS

Comidor Data component

- When inserting new records into other tables through the Comidor Data component, the system automatically stores the new record in a field, making it easy to use in your workflow.
- You can now perform Insert, Update, or Delete operations on all simple and process-enabled table applications, including system apps such as Opportunities, Projects, etc.

Email Component

- You can now define a dynamic email account as the sender of each workflow email
- The attachment options in a workflow email have been enhanced, as you can now include hardcoded files from your PC, or any file that is dynamically attached to the process attachments.
- For task emails you can store the email link to a user field and use it in your workflow. This email link grants the email recipient temporary access to the task form, enabling them to complete a workflow task outside of the platform.

Convert Data

Stop wasting time and effort manually converting data from different file formats! Convert Data improvement with its lightning-fast technology, is the perfect feature for you. With the enhanced Convert Data component, you can convert from Excel to CSV, Docx to PDF, or Docx to TXT in the blink of an eye! Get the ultimate boost in process automation today and make your life easier with Convert Data Improvement.

COPY WORKFLOW COMPONENTS

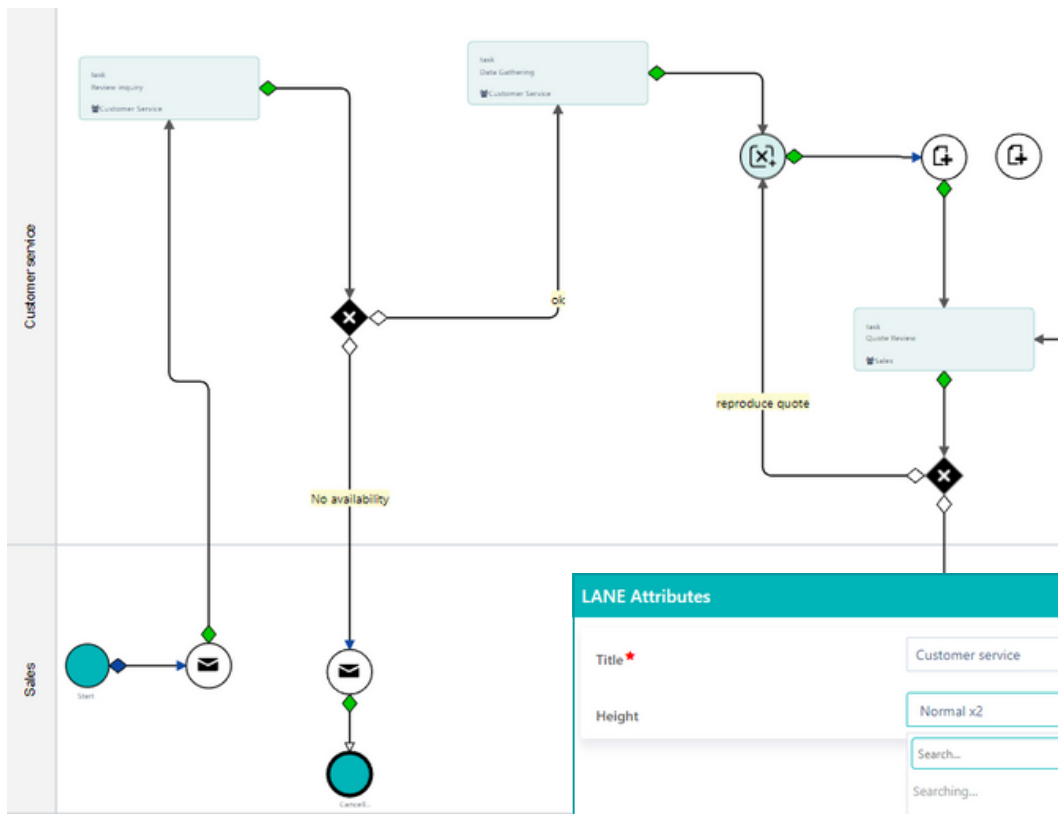

Save valuable development time, by copying a workflow component:

- tasks
- scripts
- comidor data
- document creator

WORKFLOWS IMPROVEMENTS

Workflow design has been improved by empowering the designer to **group the activities of a workflow into swim lanes** and to define the height of each swim lane.

- When you creating or editing a lane, you can choose from 3 options for the height: normal, normal x2, and normal x3.

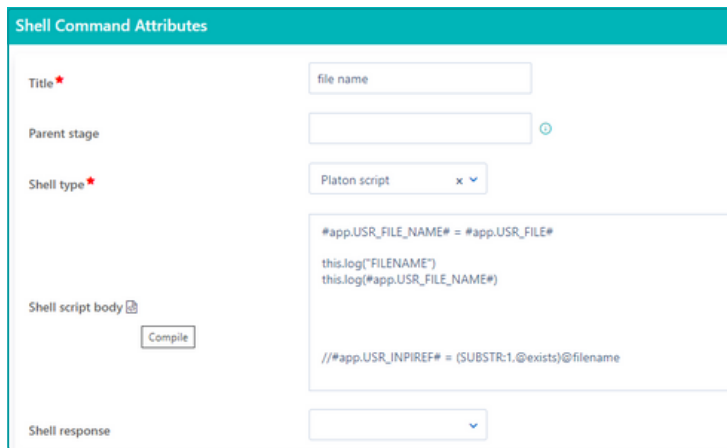

Make tedious workflows faster and easier with the **start workflow subprocess!** Start a workflow subprocess from the web server by simply clicking one button, instead of waiting for the batch server.

WORKFLOWS CODE COMPILE

Take control of your code with Code Compile!

This powerful feature helps you avoid costly and time-consuming script errors before they occur. With real-time error alerts and easy navigation, you can ensure your scripts run smoothly from start to finish. Say goodbye to hours of debugging and hello to faster development times with Code Compile.

Compile code functionality has been included to:

- Shell Command workflow component
- User forms
- Event scripts

WORKFLOW EDITING LOCK

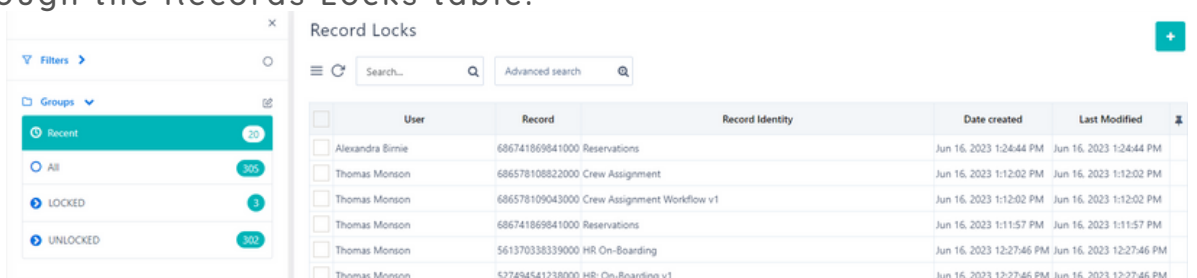

With our improved workflow editing feature, you'll get a pop-up message to let you know when someone else is editing the same workflow - so you don't waste time making duplicate changes.

Respective alerts also notify designers when another user is editing an application.

System administrators can manage and unlock any locked workflow or application through the Records Locks table.

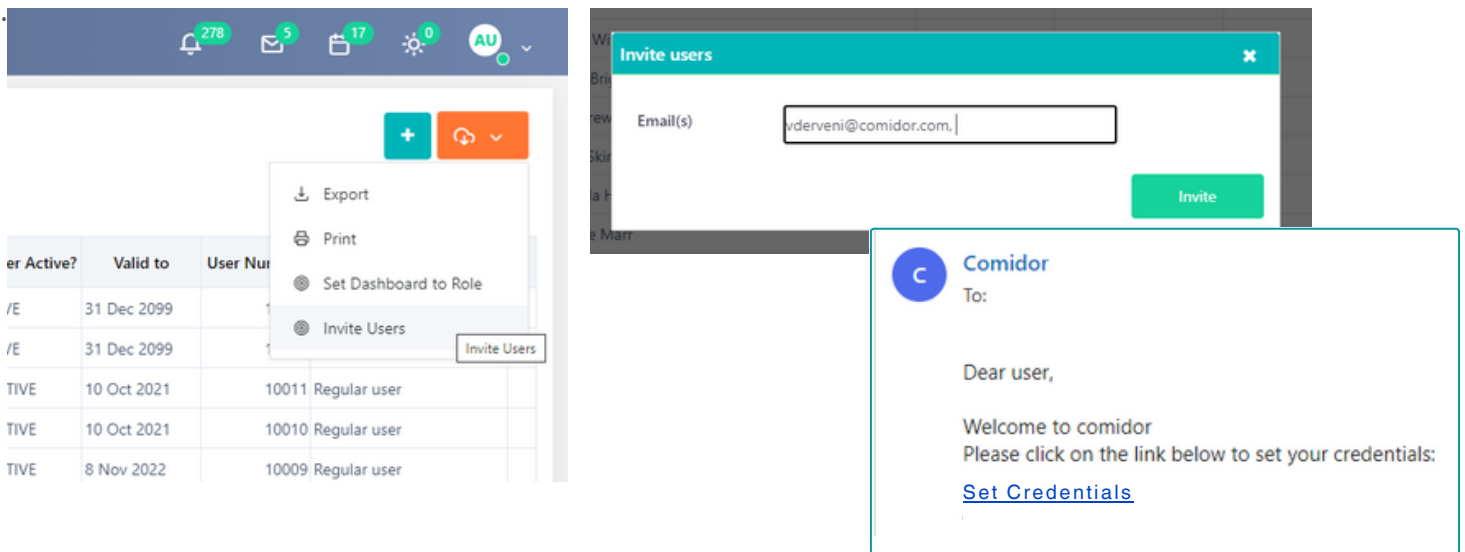

GENERAL

INVITE USERS FUNCTIONALITY

The "Invite Users" feature offers a convenient way to add multiple users to your account without having to manually create each user account and then send the login instructions.

From the Users' unit, the system administrator can easily define one or more email accounts to send an invitation. The system will automatically send an email to each recipient, containing clear instructions on how to reset their credentials and log in to the system.

PROJECT MANAGEMENT ENHANCEMENTS

☑ Enhance your task management capabilities with Comidor v6.3's new feature that allows you to **select and modify assignees, scheduled dates, and times** for multiple tasks simultaneously within project work packages.

Work Packages Design / 6 Jun 2023

Change Assignee

Assigned to: Alexandra Birnie

Users: Alexandra Birnie, Ayda Stradbroke, Charlie Marr, David Wittnome

Once multiple tasks are selected, users can modify the assignees of those tasks in one action. In addition, this feature also enables you to adjust the scheduled dates and times of multiple tasks simultaneously!

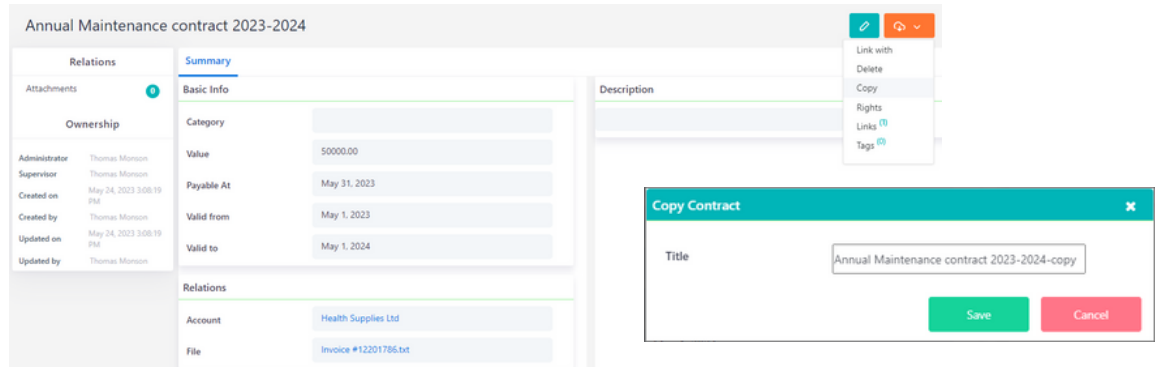

- Comidor v6.3 introduces a powerful feature that enhances the **pause functionality of projects and work packages** by allowing users to add comprehensive remarks or comments. When deciding to pause a project or work package, a pop-up window appears.

This window not only allows you to specify the date range for the pause (from and to dates) but it also provides an expanded space for capturing detailed comments related to the pause.

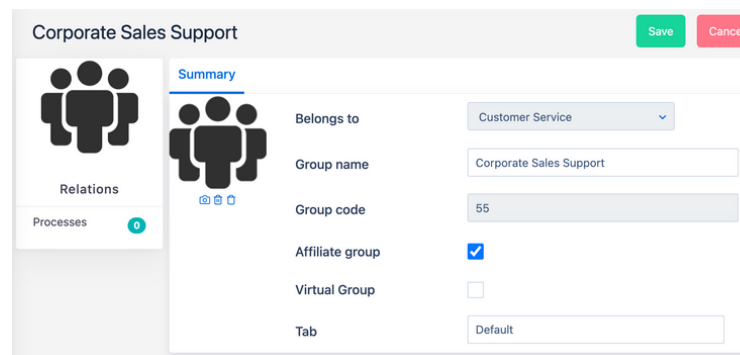

OTHER IMPROVEMENTS

- The new **"Copy Contract"** feature enhances the platform's contract management capabilities by enabling you to easily duplicate contracts. Open a contract record, click on the Actions button, and select "copy". Eliminate the need to manually recreate contract information from scratch and enhance the efficiency of contract management.

- The **"Uncheck Virtual and Affiliate"** feature enhances the editing functionality of the platform's organizational chart by introducing the possibility to deselect the virtual and affiliate checkboxes when modifying a group.
